

Hannover Clinical Trial Center GmbH

The Hannover Clinical Trial Center (HCTC) is a professional cooperation partner in clinical research and development. The HCTC offers the complete range of services of a non-profit academic clinical research organisation (ARO).

The HCTC offers the complete range of services of a non-profit clinical research organisation, for instance, the design, implementation and evaluation of clinical trials with both medicinal products and medical devices in accordance with recognised international standards, such as GCP guidelines, the German Medicinal Products Act or the German Medical Devices Act.

Network and expertise

A special feature of the HCTC is the strong academic background of its staff members and its close networking with the Hannover Medical School (MHH) and other scientific institutions, for example, the Fraunhofer Institute for Toxicology and Experimental Medicine in Hannover or the Helmholtz Centre for Infection Research in Braunschweig. Clients benefit from HCTC's excellent clinical and scientific experience in a wide range of therapeutic indications.

The excellent staff members of the HCTC have years of experience in clinical research. The service portfolio includes all aspects of the design and implementation of clinical research projects, for instance, quality assurance, cooperation with competent authorities and data management.

Service portfolio and experience

The services of the HCTC are available for (academic) research institutions as well as businesses in the biotechnological, pharmaceutical, and medical technological sector. The HCTC supports entire projects as well as individual parts of clinical trials with medicinal products or medical devices for both industrial enterprises and scientific institutions.

The HCTC is headed by Professor Heiko von der Leyen, MD, as Managing Director and by Andreas Tecklenburg, MD, as the responsible manager of Hannover Medical School (being the main shareholder of HCTC). Professor von der Leyen has many years of experience in academic research but also gained expert knowledge from management positions in the biotechnical industry. His scientific stations were Hamburg (pharmacology), Stanford (USA) and Hannover (internal medicine and cardiology). Professor von der Leyen closely cooperates with a large international academic and industrial network.

Basis of the success of the HCTC is the expertise and knowledge of its members of staff. The HCTC team consists of project managers, clinical research associates, data managers, study assistants and quality managers. All members of staff have a first class education with a scientific background and are experienced in clinical research and development.
